1983
ANNUAL SUMMARY OF VITAL STATISTICS

IDAHO DEPARTMENT OF HEALTH AND WELFARE

John V. Evans
Governor

Rose Bowman
Director
Department of Health and Welfare

Ralph W. Carpenter
Administrator
Division of Health

Bee Biggs, R.N.
State Registrar
Bureau of Vital Statistics, Standards and
Local Health Services

About the Cover:

Welcome to Idaho! The gateway to the Frank Church Primitive Area from the Middle Fork and Salmon Rivers. The area offers hunting, fishing, and white water raft trips, along with beautiful scenery.

TABLE OF CONTENTS

DEFINITIONS AND FORMULAS iv

POPULATION 1

July 1, 1981-83 estimates and April 1, 1980 Census of population of States 2
July 1, 1981-83 estimates and April 1, 1980 Census of population of Idaho districts and counties 3
Percent change, 1980-1983, Idaho counties *(map)* 4
July 1, 1982 estimates of population of Idaho cities 5
April 1, 1980 Census of population by age and sex *(Idaho districts, counties)* 8
April 1, 1980 Census of population of Idaho, by age and sex 12

TRENDS AND SUMMARY 13
Trends of Idaho vital events 13
Vital statistics, 1974-1983 15
Summary of 1983 vital statistics *(districts, counties)* 17
Summary of 1983 infant, fetal, perinatal mortality *(districts, counties)* 18

NATALITY 19
Live births and rates, 1979-1983 *(districts, counties)* 21
1983 Live births: sex and race *(districts, counties)* 22
1983 Live births: age of mother *(districts, counties)* 23
1983 Live births: attendant at and place of birth *(districts, counties)* 24
1983 Live births: birth and fertility rates *(U.S., Idaho, districts, counties)* 25
1983 Live births: live birth order by age of mother 26
1983 Live births: age-specific fertility rates *(U.S., Idaho)* 26
1983 Live births: trimester prenatal care began *(districts, counties)* 28
1983 Live births: educational attainment of mother *(districts, counties)* 29
1983 Live births: prenatal care by education of mother 30
1983 Live births: complications and malformations 30
1983 Live births: complications and malformations by prenatal care 31
1983 Live births: APGAR scores 31
1983 Immature live births: race of mother *(districts, counties)* 32
1983 Immature live births: age of mother *(districts, counties)* 33
1983 Immature live births: live birth order by age of mother 34
1983 Immature live births: age-specific immaturity rates 34
1983 Immature live births by weight categories *(districts, counties)* 35
Out-of-wedlock live births 36
1983 Out-of-wedlock live births: race of mother *(districts, counties)* 37
1983 Out-of-wedlock live births: age of mother *(districts, counties)* 38
1983 Out-of-wedlock live births: live birth order by age of mother 39
1983 Out-of-wedlock live births: age-specific ratios 39

MORTALITY 41
Deaths and rates, 1979-1983 *(districts, counties)* 43
1983 Deaths: sex and race *(districts, counties)* 44
1983 Deaths: age at death *(districts, counties)* 45
1983 Deaths: ten leading causes, by sex *(U.S., Idaho)* 46
1983 Deaths: ten leading causes by age group 47
1983 Deaths: malignant neoplasms by site 51
1983 Deaths: selected causes *(U.S., Idaho, districts, counties)* 52
1983 Accidental deaths occurring in Idaho: category by age 54
1983 Reported morbidity from selected diseases *(districts, counties)* 56
Reported morbidity from selected diseases, 1979-1983 58
Infant, fetal, maternal mortality 59
Infant deaths and rates, 1979-1983 *(districts, counties)* 61

1983 Infant deaths: sex and race *(districts, counties)* 62
1983 Infant deaths: neonatal, postneonatal *(districts, counties)* 63
1983 Infant deaths: causes of death, neonatal and postneonatal 64
1983 Infant deaths: causes of death *(U.S., Idaho, districts)* 65
Stillbirths and ratios, 1979-1983 *(districts, counties)* 66
Perinatal deaths and ratios, 1979-1983 *(districts, counties)* 67

INDUCED ABORTION 69
Induced abortions, 1982-1983 *(districts, counties)* 70
1983 Induced abortions: age of patient by marital status 71
1983 Induced abortions: previous abortions, living children 71
1983 Induced abortions: procedure by gestation 72
1983 Induced abortions: complications by procedure 72
1983 Induced abortions: age of patient *(districts, counties)* 73
1983 Induced abortions: race of patient *(districts, counties)* 74

MARRIAGE AND DIVORCE 75
Marriages, 1974-1983, *(districts, counties)* 76
1983 Marriages: age of bride by age of groom 77
1983 Marriages: race of bride by race of groom 77
1983 Marriages: age of bride by marital status 78
1983 Marriages: age of groom by marital status 79
Divorces, 1974-1983 *(districts, counties)* 80
1983 Divorces: number of children affected 81
1983 Divorces: legal grounds 82
Divorces, 1981-1983: duration of marriage 83

APPENDIX 85
Appendix A: Vital statistics profile of Idaho by district and county 85
Appendix B: Detailed causes of death by age 92

Printed by
State of Idaho, Department of Administration
Bureau of Printing Services

DEFINITIONS AND FORMULAS

RESIDENCE DATA — data allocated by place of residence of the decedent (deaths), or by place of residence of the child's mother (births, fetal deaths).

OCCURRENCE DATA — data allocated by place where event occurred, regardless of the person's place of residence (marriages, divorces).

LIVE BIRTH — a birth that shows any sign of life after delivery.

(CRUDE) BIRTH RATE — number of live births per 1,000 population.

$$\left(\frac{\text{live births}}{\text{population}} \times 1{,}000\right)$$

FERTILITY RATE — number of live births per 1,000 women 15-44 years of age.

$$\left(\frac{\text{live births}}{\text{females 15-44}} \times 1{,}000\right)$$

OUT-OF-WEDLOCK RATIO — number of out-of-wedlock live births per 1,000 live births.

$$\left(\frac{\text{out-of-wedlock live births}}{\text{live births}} \times 1{,}000\right)$$

IMMATURE BIRTH — a live birth weighing 2500 grams (5½ pounds) or less.

IMMATURE BIRTH RATE — number of immature live births per 1,000 live births.

$$\left(\frac{\text{immature live births}}{\text{live births}} \times 1{,}000\right)$$

STILLBIRTH — any birth after 20 weeks gestation which is not a live birth (does not include any induced abortions).

STILLBIRTH RATIO — number of stillbirths per 1,000 live births.

$$\left(\frac{\text{stillbirths}}{\text{live births}} \times 1{,}000\right)$$

INFANT DEATH — death of an infant under one year of age.

INFANT DEATH RATE — number of infant deaths per 1,000 live births.

$$\left(\frac{\text{infant deaths}}{\text{live births}} \times 1{,}000\right)$$

NEONATAL DEATH — death of an infant within the first 27 days of life.

NEONATAL DEATH RATE — number of neonatal deaths per 1,000 live births.

$$\left(\frac{\text{neonatal deaths}}{\text{live births}} \times 1{,}000\right)$$

PERINATAL DEATH — includes stillbirths and deaths to infants within the first six days of life.

PERINATAL DEATH RATIO — number of perinatal deaths per 1,000 live births.

$$\left(\frac{\text{perinatal deaths}}{\text{live births}} \times 1{,}000\right)$$

MATERNAL DEATH — death attributable to complications of pregnancy, childbirth, or the puerperium.

MATERNAL DEATH RATE — number of maternal deaths per 10,000 live births.

$$\left(\frac{\text{maternal deaths}}{\text{live births}} \times 10{,}000\right)$$

(CRUDE) DEATH RATE — number of deaths per 1,000 population.

$$\left(\frac{\text{deaths}}{\text{population}} \times 1{,}000\right)$$

CAUSE-SPECIFIC DEATH RATE — number of deaths from a specific cause per 100,000 population.

$$\left(\frac{\text{deaths from specific cause}}{\text{population}} \times 100{,}000\right)$$

Winter carnivals are held in Idaho from December through March. This is one of the bigger-than-life sculptures that line the streets of McCall during the carnival. Snowshoe football, street dances, snowmobile races and parades are also featured.

POPULATION

POPULATION

This year, the population estimates for 1983 have been made available by the Federal-State Cooperative Program for Local Population Estimates. All vital rates are based on these provisional 1983 estimates unless otherwise specified. Also included are revised 1982 and 1981 estimates. Vital rates for those years have been adjusted.

Since the 1980 census, Idaho's population has grown by 4.8%. The chart on the following page shows that Idaho was the fourteenth fastest growing state since the census. Alaska had the highest growth rate in the nation for the same period (1980-83) of 19.2%. With the exception of Florida, all states showing a rapid rate of growth were in the western part of the nation.

In Idaho, the fastest growing area from 1980-83 was District 5 (south-central Idaho), with a growth rate of 7.2%. District 4, (central) and District 7 (northeast) grew by 6.9% and 6.6%, respectively. District 2 (north central) experienced a 0.9% growth, the lowest for the period.

On the county level, the fastest growing county was Custer, with a rate of 64.7%. Blaine County was second with a growth rate of 23.4%. Thirteen counties actually lost population; Shoshone County had the highest rate of loss of 8%.

The largest numerical increase occurred in Ada County (12,805), followed by Canyon and Kootenai Counties with increases of 3,368 and 3,331, respectively. Shoshone County lost the most numerically (-1,533).

Also in this issue are the latest population estimates for Idaho cities as of July 1, 1982. These estimates have also been made available by the Federal-State Cooperative Program for Local Population estimates. For the period 1980-82, the cities of Clayton and Challis, both in Custer County, had the highest rate of population gain, 62.8% and 59.4%, respectively. This increase reflects the fact that Custer County as a whole had the highest rate of gain for 1980-83. The city of Eagle had the highest rate of population loss, (-43.1%), with the city of Placerville a distant second (-15%).

POPULATION ESTIMATES: JULY 1, 1981, 1982 AND 1983

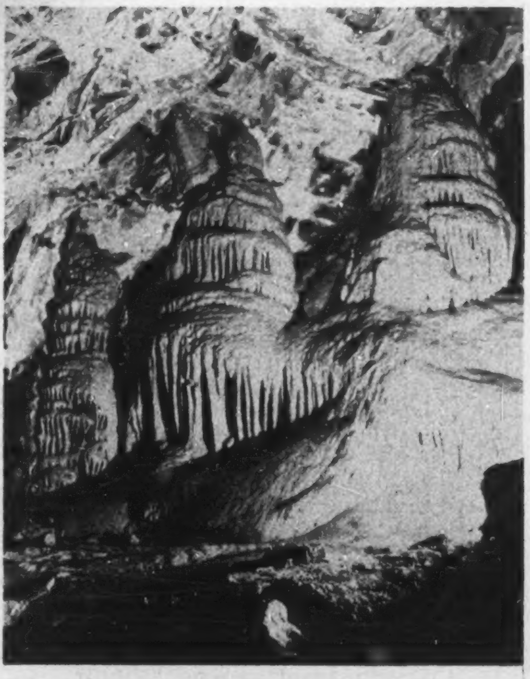
*The official census total for Idaho was changed from 943,935 to 943,038; however, the age/sex data have not been changed to reflect this correction.

Ice formations inside the Crystal Ice Caves in American Falls. This was designated a United States National Landmark in 1968.



"Throne Room" in Minnetonka Cave where stalactites and stalagmites have blended in limestone, embellished with whipped cream-like frosting, is but one of many interesting and unusual formations within the cavern in Idaho's Bear Lake County.

TRENDS & SUMMARY

TRENDS IN IDAHO

BIRTHS	Reversing the pattern of the 1970's, the rate of Idaho births has decreased the last four years. At 19.0 (provisional), it stands at its lowest level since 1973. The number of births has also declined to its lowest point since 1977, even though the population has grown considerably. In 1983, 18,742 births occurred to Idaho mothers, a decrease of 4%.
OUT-OF-WEDLOCK BIRTHS	Out-of-wedlock births increased in 1983 for the ninth consecutive year, to 1,768 (94.1 per 1,000 live births). Since 1974, the number of out-of-wedlock births has risen 86%; during the same time the ratio has increased from 61.0 to 94.1. Districts 1 and 3 continue to record the highest ratios.
DEATHS	The number of Idaho deaths increased 4% in 1983 to 7,204. The rate of death has ceased the long-term downward trend in evidence during the sixties and seventies, rising slightly from 7.1 (revised) in 1982 to 7.3 (provisional) in 1983. Cause-specific death rates rose for nine of the ten leading causes of death in Idaho.
STILLBIRTHS	Both the number and rate of stillbirths change little from year to year, although a general decline has been evident over the last several years. In 1983, 132 stillbirths occurred, for a ratio of 7.0 per 1,000 live births.
INFANT DEATHS	Infant deaths are also subject to fluctuations because of the small data base. Generally, infant mortality in Idaho has declined dramatically, although the last five years have not seen much change. A total of 199 infant deaths occurred in 1983, compared to 195 in 1982. The 1983 rate of 10.6 is higher than the previous two years, but is still below 1980. Neonatal deaths dropped from 6.3 in 1982 to 5.7 in 1983; postneonatal deaths increased to 4.9 in 1983.
MATERNAL DEATHS	Two Idaho residents died from complications relating to childbirth, the first such deaths since 1980.
MARRIAGES	The number and rate of Idaho marriages declined in 1983, from 14,066 (14.4, revised rate) in 1982, to 13,421 (13.6, provisional rate) in 1983. The number of marriages is still higher than those recorded in the mid-seventies, but the rate of marriage is generally declining, and at 13.6 is at its lowest point in many years.
DIVORCES	After sixteen years of annual increases, the number of divorces in Idaho has decreased for two straight years. In 1981, a record-high 6,770 divorces were granted, but only 6,238 occurred in 1982 and 6,228 in 1983. The rate of divorce has also declined, and at 6.3 (provisional) per 1,000 population, it is the lowest rate since 1974.

Balanced Rock shaped by the wind over time. In Castleford, Southern Idaho.

NATALITY

NATALITY

Nearly two percent fewer babies were born in the United States in 1983 than in 1982, reversing a long trend of increasing numbers of births. The birth rate of 15.5 was 3% lower than the 1982 rate of 16.0 (both provisional). The fertility rate decreased 4% from 67.8 to 65.4 live births per 1,000 women 15-44 years of age. According to the National Center for Health Statistics, the decrease in U.S. births is apparently a result of two factors. First, the population in the childbearing years is beginning to age, producing a shift to the older age groups: even though the number of women 15-44 increased by one percent between 1982 and 1983, the number of women 15-24 years of age declined (this group typically accounts for nearly half the live births). The second factor is the lowering of the composite, and at least some of the age-specific, fertility rates. The Census Bureau projects only a one percent increase each year in the number of women aged 15-44, so the declines noted in the fertility rates should help keep future numerical increases in live births small or nonexistent.

Idaho also experienced a decline in both the number and rate of births in 1983. The number of live births fell 4%, and the birth rate was down by 5%, so the decreases were even more pronounced at the State level. Idaho's 1983 estimated fertility rate (based on 1980 census information) was 87.3 live births per 1,000 women 15-44 years of age. This represents a slight decrease from 91.2 in 1982, but since both rates were based on 1980 census data, no conclusions can be drawn. In comparison, the 1983 national rate was 65.4. Idaho's fertility rates have always been substantially higher than the U.S. rates, but the difference is diminishing: in 1979, Idaho's rate was 43% higher; in 1983, the difference was 33%.

Birth rates in Idaho range from 15.4 in District 2 to 23.2 in District 7. The birth rates of the districts do not vary widely from year to year; areas in the northern and southwestern parts of Idaho traditionally experience much lower birth rates than the south central and southeastern areas.

OUT-OF-WEDLOCK BIRTHS

Out-of-wedlock live births totaled 1,763 in 1983, a 2% increase over the 1,723 recorded in 1982. This is the highest number of out-of-wedlock births ever recorded in Idaho. Coupled with a 4% decrease in the number of live births, this higher number translates to a 7% rise in the ratio of out-of-wedlock births to live births (from 88.0 in 1982 to 94.1 in 1983). Considering that the national ratio was 189.2 in 1981 (the latest year available), Idaho appears to compare favorably. However, one must keep in mind the impact of the higher nonwhite ratios on both the nation and Idaho: Idaho has a small nonwhite population, so those higher ratios have little effect. Additionally, the out-of-wedlock ratios for Idaho's nonwhites are significantly lower than those for the nonwhites in the rest of the country; not as much difference exists between the corresponding white ratios.

			Nonwhite	
	Total	White	Total	Black
U. S. (1981)	189.2	115.9	485.1	559.5
Idaho (1983)	94.1	89.0	291.7	156.9

More specific race data are available for Idaho:

IDAHO RACE-SPECIFIC RATIOS

	1983	1982	1981	1980	Change 1980-83
White	89.0	84.0	80.9	75.5	+17.9%
Black	156.9	148.1	140.4	255.8	-38.7
American Indian	493.3	415.9	364.9	373.8	+32.0
Japanese	66.7	57.7	93.0	51.3	+30.0
Other nonwhite	81.5	103.4	38.8	48.8	+67.0
Spanish surname*	139.6	144.1	127.6	NA	+9.4**

The 1981 national ratio of nonwhite births occurring out-of-wedlock was 66% higher than Idaho's 1983 nonwhite ratio, and the national white out-of-wedlock birth ratio was 30% higher than Idaho's. One must keep in mind two influencing factors: (1) the U. S. ratios shown above lag two years behind Idaho's; undoubtedly the 1983 U. S. ratios will be higher than in 1981; and (2) Idaho has a high birth rate; since the births provide the base denominator for computing the ratio, the higher the number of live births, the lower the ratio.

Districts 1 and 3 continue to have the highest ratios by a considerable margin, with 134.5 and 131.8, respectively; District 2 is third at 102.8. All districts except District 2 recorded a higher ratio of out-of-wedlock births in 1983.

The Craters of the Moon National Monument presents the weird, wonderful world of lava and is like walking on the surface of the moon. Formations resemble cones, craters, and crags of the moon surface. Vegetation is sparse.

MORTALITY

MORTALITY

After a very small rise (0.3%) in 1982, Idaho deaths increased 4% in 1983 to 7,204. The rate of death also rose, from 7.1 (revised) in 1982 to 7.3 (provisional) in 1983. It appears that Idaho's death rate has ceased its long-term downward trend, as no significant changes have been noted since the mid- to late-seventies. The U.S. death rate was 8.6 in 1983, the same as in 1982; this is only the third time in the past ten years that the national rate has not recorded a decline. Comparing the national death rate with Idaho's reveals that Idaho rates have historically been lower. Age-adjusted rates* show that even allowing for the differing age structures (Idaho's population is younger), Idaho's death rate is below that of the nation.

The five leading causes of death are: (1) heart disease, (2) malignant neoplasms, (3) cerebrovascular disease, (4) accidents and (5) pneumonia and influenza. These leading five causes are the same for both the U.S. and Idaho. The next five causes are somewhat different (rates are deaths per 100,000):

Causes ranked 6-10 in U.S.	Rank in Idaho
6. Diabetes Mellitus (15.2)	7 (12.3)
7. Suicide (11.9)	6 (16.1)
8. Chronic liver disease and cirrhosis (11.9)	11 (8.9)
9. Atherosclerosis (11.1)	8 (11.9)
10. Other diseases of arteries, arterioles and capillaries (9.0)	10 (9.3)

Homicides were the tenth-leading cause of death nationally in 1982, but the rate dropped from 9.6 in 1982 to 8.2 in 1983. Of the ten leading causes in the U.S. in 1983, increases were recorded in the rates of death from pneumonia and influenza; diabetes mellitus; suicide; chronic liver disease and cirrhosis; and other diseases of arteries, arterioles and capillaries. Rates decreased for heart disease, cerebrovascular disease, and accidents, and remained unchanged for malignant neoplasms.

Comparing Idaho's provisional 1983 rates with 1982 revised rates reveals that of the ten leading Idaho causes of death, rates increased for all causes except cerebrovascular disease.

When making comparisons of 1979-1983 mortality data with earlier years, one must be aware that the manner of coding the underlying cause of death changed in 1979 to the ninth revision of the **International Classification of Diseases** (ICD-9). The introduction of ICD-9 in all states has resulted in a major reclassification of several causes of death. Therefore, there are major discontinuities in the trends for certain causes of death. (Comparability ratios between ICDA-8 and ICD-9 have been published in the Vital Statistics Summaries, 1979-1982.)

To eliminate the bias inherent in differing age compositions (an older population usually has a higher death rate simply because the risk of dying increases as one ages), age-specific death rates can be calculated. These rates are then applied to a standard population, often the U.S. Population, and the composite or "age-adjusted," death rate is then calculated. Five-year average (1968-1972) death rates were computed for Idaho counties using the U.S. as a standard population, and has been published in several earlier publications of this report.

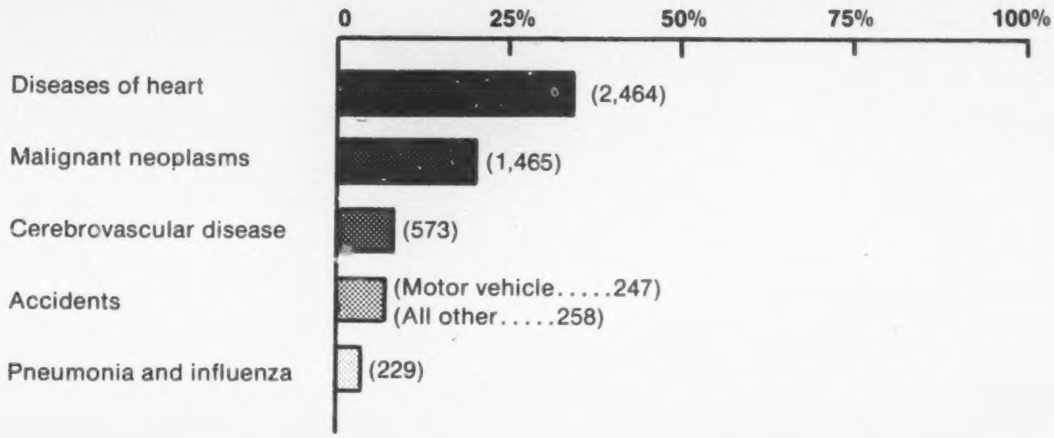
9. Bronchitis, emphysema, and asthma	114	11.5	78	36	8.6
10. Other diseases of arteries, arterioles and capillaries	92	9.3	61	31	9.0
All other causes	1363	-	763	600	-

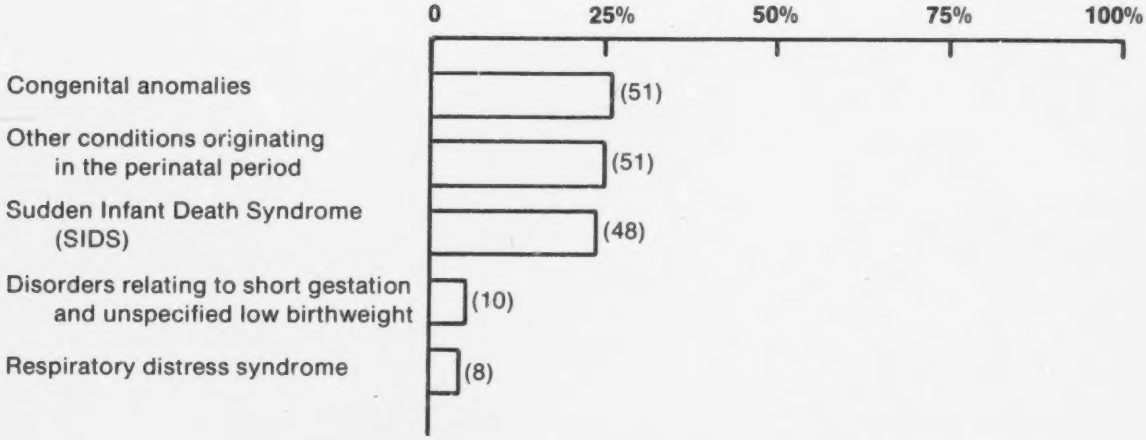
LEADING CAUSES OF DEATH BY AGE GROUP
IDAHO, 1983

ALL AGES: (7,204 deaths)



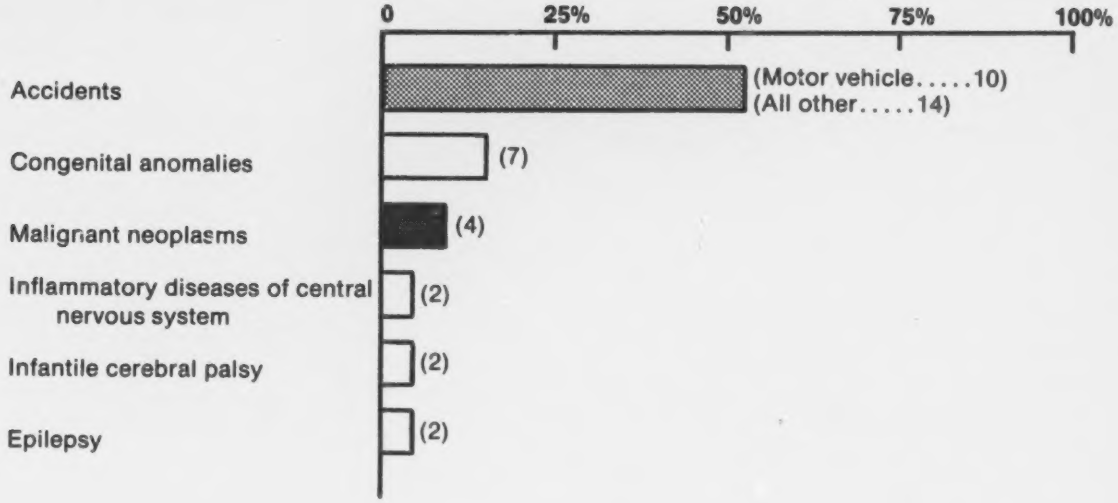
Other Causes	Deaths
Suicide	*159*
Diabetes mellitus	*122*
Atherosclerosis	*118*
Bronchitis, emphysema and asthma	*114*
Other diseases of arteries, arterioles and capillaries	*92*

AGE: < 1 YEAR (199 deaths)

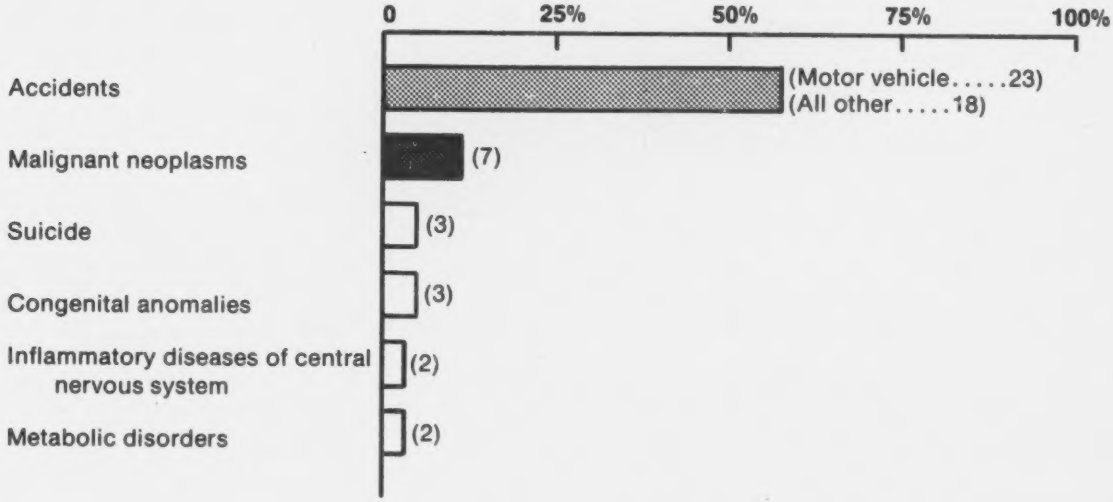


Other Causes	Deaths
Diseases of heart	*5*
Accidents	*4*
Motor vehicle	*1*
All other	*3*
Pneumonia and influenza	*3*

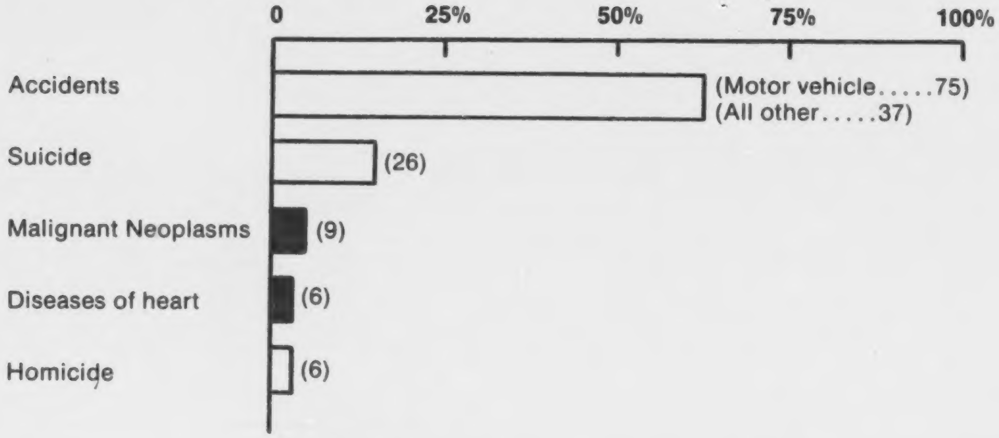
AGE: 1-4 YEARS (46 deaths)



AGE: 5-14 YEARS (66 deaths)

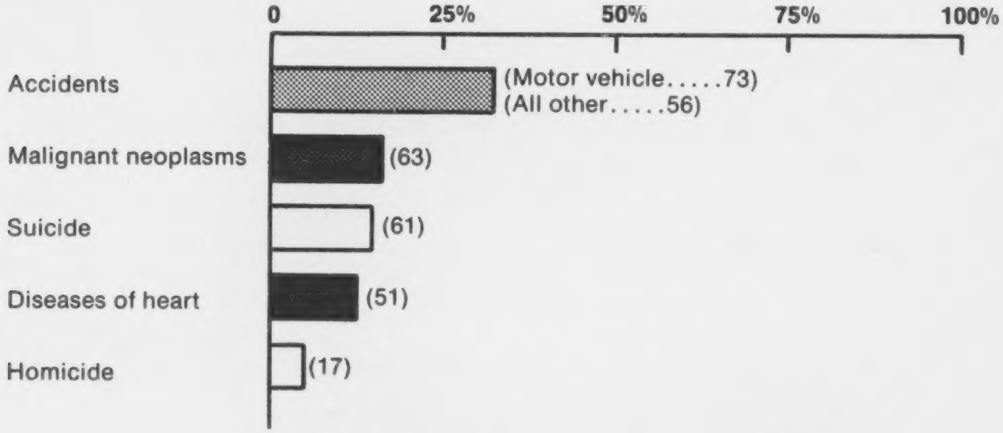


AGE: 15-24 YEARS (178 deaths)



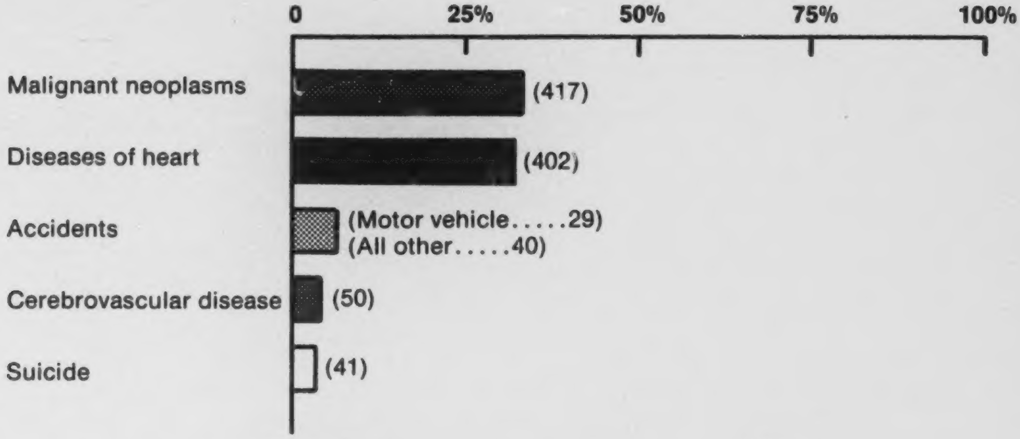
Other Causes	Deaths
Congenital anomalies	*4*
External cause, undetermined if accident, suicide or homicide	*2*
Muscular dystrophies and other myopathies	*2*
Chronic obstructive pulmonary disease	*2*

AGE: 25-44 YEARS (398 deaths)



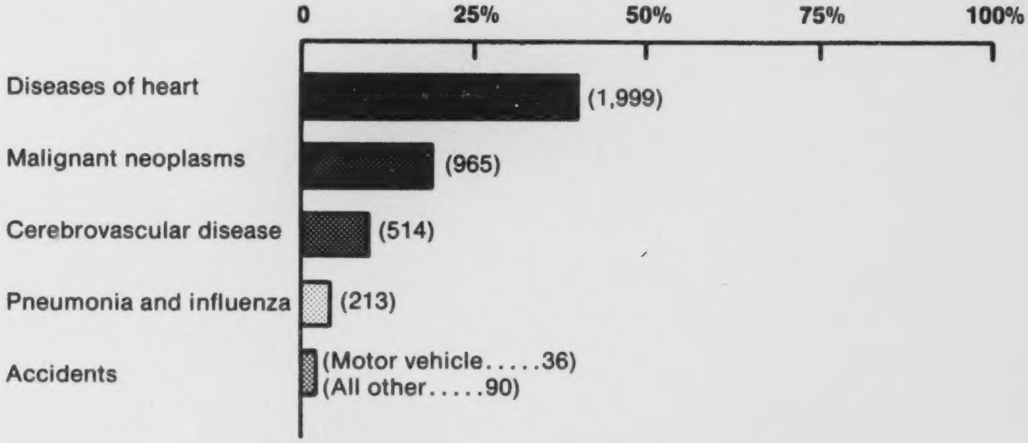
Other Causes	Deaths
Chronic liver disease and cirrhosis	*15*
Diabetes mellitus	*10*
Cerebrovascular disease	*8*
Pneumonia and influenza	*3*
Congenital anomalies	*3*

AGE: 45-64 YEARS (1,253 deaths)



Other Causes	Deaths
Chronic liver disease and cirrhosis	37
Bronchitis, emphysema and asthma	22
Diabetes mellitus	18
Septicemia	11
Other diseases of arteries, arterioles and capillaries	8
Benign neoplasms	8
Nephritis and nephrosis	8

AGE: 65+ YEARS (5,066 deaths)



Other Causes	Deaths
Atherosclerosis	115
Diabetes mellitus	94
Bronchitis, emphysema and asthma	88
Other diseases of arteries, arterioles and capillaries	81
Nephritis and nephrosis	40

IDAHO MALIGNANT NEOPLASM DEATHS

INFANT, FETAL AND MATERNAL MORTALITY

The number of Idaho resident infant deaths increased slightly from 195 in 1982 to 199 in 1983. The number of live births decreased in 1983, resulting in a higher infant death rate of 10.6 per 1,000 live births. Considering the size of the data base, such fluctuations are not unexpected, as is evidenced by the graph on the following page. The general trend of infant death rates is downward, although it may be worth noting that 1983 marks the second consecutive increase in Idaho. Whether this signals the end of a long-term decline or merely a fluctuation of a small data base remains to be seen. It is perhaps significant that the neonatal death rate dropped from 6.3 in 1982 to 5.7 in 1983, although it is still somewhat higher than the 1981 rate of 5.2. Postneonatal deaths rose to 4.9, the highest rate in over a decade.

Infant mortality in the U.S. continued to decline, from 11.2 in 1982 to 10.9 in 1983. Neonatal and postneonatal death rates both decreased, from 7.6 to 7.2 and from 3.7 to 3.6, respectively. The difference between U.S. and Idaho infant mortality has narrowed considerably, particularly in the last two years (see graph on following page). The composition of the rates varies from year to year, with the lower Idaho neonatal death rates normally accounting for the lower Idaho infant death rates. One factor is the different population structures: Idaho is predominantly white, and whites normally experience lower infant mortality.

In Idaho, District 2 recorded the lowest 1983 infant death rate of 7.7. The highest rate (14.1) was reported by District 3 for the third consecutive year; an unusually high rate of postneonatal deaths in 1983 contributed to its high mortality. Perinatal deaths occurred least frequently to District 2 residents (9.9), and most frequently to residents of District 3 (16.6).

Stillbirths (a component of perinatal mortality) declined again in 1982, with the ratio dropping to 7.0 per 1,000 live births, the lowest ratio since 1979. District rates range from 4.8 (District 7) to 10.4 (District 3).

There were two Idaho maternal deaths in 1983, one an Ada County resident, the other a resident of Canyon County.

798.0	Sudden Infant Death Syndrome	48	2.6	5	0.3	43	2.3
Residual	All other causes	26	1.4	1	0.1	25	1.3

Congenital anomalies remained as the leading single cause of infant deaths in both Idaho and the U.S. The 1983 death rate in Idaho from congenital anomalies was 2.7 deaths per 1,000 live births; the national rate was slightly lower at 2.3. The second leading cause in both Idaho and the nation was Sudden Infant Death Syndrome (SIDS). After decreasing in 1982, the rate of deaths from SIDS in Idaho increased to 2.6, a level comparable to 1981 (2.4). The U.S. rate remained unchanged at 1.3 per 1,000 live births.

Although more neonatal deaths occurred in the general category, "Other conditions originating in the perinatal period" (which includes such conditions as complications of pregnancy and delivery, infections, etc.), the leading single cause of neonatal deaths in Idaho was congenital anomalies (1.7 deaths per 1,000 live births). The second-leading cause was "Disorders relating to short gestation and unspecified low birthweight" (0.5 deaths per 1,000 live births). Deaths from Respiratory Distress Syndrome declined from an unusually high rate of 1.2 in 1982 to 0.4 in 1983.

In the postneonatal period, SIDS accounted for 47% of the deaths; Idaho's rate of postneonatal deaths from SIDS was 2.3. Congenital anomalies were the second-leading cause of postneonatal mortality with a rate of 1.0.

Standing guard near the entrance to the Crystal Ice Caves is a grotesque hand of hardened lava formed by an upheaval frozen in midair.

INDUCED ABORTION

INDUCED ABORTIONS

It is estimated that about one in four pregnancies worldwide is terminated by induced abortion, which translates to about 40 million abortions each year. Approximately half are still obtained illegally, and the resulting maternal deaths are now a worldwide leading cause of death to women in the childbearing ages. In areas lacking good family planning services, the medical complications from illegal abortions are nearing epidemic proportions.*

In the United States, more than 1.3 million legal abortions were reported to the Center for Disease Control in 1981 (the latest data available). This is less than a 1% increase over 1980, and the abortion ratio (legal abortions per 1,000 live births) declined during the same period from 359/1,000 to 358/1,000. This is the first year since the CDC began abortion surveillance in 1969 that a decline in the ratio has occurred; in addition, the 1% increase is the smallest increment since 1969.**

The reporting of induced abortions in Idaho was not required until July 1, 1977. The reported numbers increased each year, from 708 during the last half of 1977 to a high at 2,706 in 1981. The number of abortions reported declined 10% in 1982 to 2,431, and increased slightly to 2,456 in 1983.

It should be noted that only those abortions done in Idaho are reported in this section--those Idaho women who traveled out-of-state for the procedure are not included in the data. In Idaho, 99.8% of all induced terminations in 1983 were done in Ada, Bannock, Blaine, Kootenai and Latah Counties, in that order. Between 1982 and 1983, the number of abortions increased in Ada, Bannock and Latah Counties, and decreased in Blaine and Kootenai Counties.

No maternal deaths have yet been reported from Idaho induced terminations.

Comparative U.S. and Idaho abortion data are listed below. Both represent occurrence, not residence, data.

	INDUCED ABORTIONS	RATIO PER 1,000 LIVE BIRTHS	RATE PER 1,000 FEMALES, 15-44
U.S. (1981)**	1,300,760	359	24
Idaho (1983)	2,456	131	11

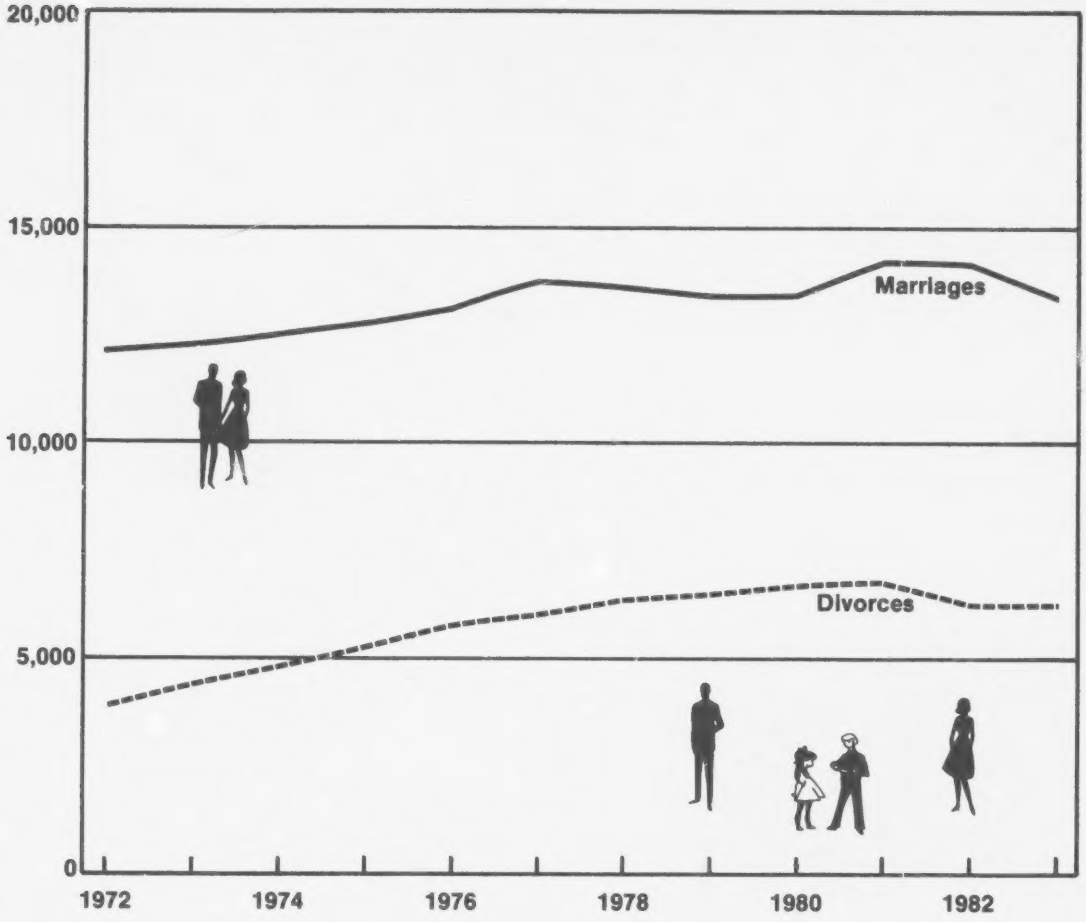
Hells Canyon, the world's deepest gorge, is the point where the Salmon River meets the Snake River. It is popular for whitewater rafting and camping spots abound on either side of the river.

MARRIAGE & DIVORCE

MARRIAGES AND DIVORCES OCCURRING IN IDAHO

1972 - 1983



Both the number and rate of marriages in Idaho decreased again in 1983, from 14,066 (14.4, revised) in 1982 to 13,421 (13.6, provisional). This decline in the rate is a continuation of the general downward trend of marriage rates in Idaho; at 13.6, it is the lowest in many years. Even so, marriages occur at a higher rate in Idaho than in the U. S. as a whole: the national rate of marriage was 10.5 in 1983, down from 10.8 in 1982. However, this difference can be accounted for by the high number of nonresidents who marry in north Idaho.

Divorces in Idaho recorded the second consecutive numerical decrease in 1983, declining to 6,228 from 6,238 in 1982. The 1983 divorce rate of 6.3 is the lowest since the mid-seventies. Divorces occur less frequently in the remainder of the nation: the U. S. divorce rate in 1983 was just 5.0, down slightly from 5.1 in 1982.
